

18/12/2025

For several years, SIPI S.p.A. has adopted an **Environmental Management System** compliant with **UNI EN ISO 14001**, a voluntary international standard that defines the requirements for structured and systematic management of environmental aspects. Maintaining this certification over time confirms the company's commitment to compliance with applicable environmental regulations and the continuous improvement of its environmental performance.

Through the implementation of the Environmental Management System, SIPI S.p.A. has consolidated procedures and controls aimed at preventing pollution, reducing the consumption of natural resources, and limiting greenhouse gas emissions, while ensuring high levels of operational efficiency and quality of production processes.

For the 2024, with analysis conducted in 2025, SIPI S.p.A. has continued its greenhouse **gas emissions monitoring and measurement activities**, completing the **Greenhouse Gas Inventory (GHG Inventory)** according to consolidated methodologies consistent with those adopted in previous years, to ensure data reliability and comparability.

Consistent with the findings for calendar year 2023, the company's environmental performance is consistent with the indicators already adopted. Specifically, the value of **0.59 tons of CO₂ equivalent for each ton of stainless steel processed**, referring to the Via Paradigna plant in Parma and calculated across the entire product life cycle from raw material production to customer delivery, continues to represent a significant indicator of SIPI's environmental performance.

An analysis of data for 2024 highlights substantial **stability in emission indicators**, confirming the effectiveness of the environmental management and control actions adopted within the Environmental Management System.

As part of its commitment to sustainability, SIPI. defines and periodically updates **environmental improvement objectives**, aimed at optimizing energy consumption, improving resource efficiency, controlling emissions, and strengthening responsible management practices throughout the supply chain. The company also promotes employee awareness of environmental issues, recognizing the central role of human resources in achieving sustainability goals.

Environmental protection is a guiding principle for SIPI that informs the company's strategic and operational decisions and is an integral part of its vision of responsible, long-term development.
